

CITS5206 Capstone Project - Group 12

Minutes of the meeting #6

Date and Time: 27 September 2024 – 9:30am

Place: CSSE Meeting Room

Participants:

- Rachel
- Kent Yip
- Phoebus Lee
- Aji Wuryanto
- Linfeng Zheng
- Subbulakshmi Seenivasan

Minutes by: Phoebus Lee

Agenda:

Present the progress of the team with the updated input from the client.

Discussion:

Excel Output

There are two HTML files for Computer Science, but they can be easily merged.

Key of the course name, ignore MJS for now

MIT in the Caidi is a number, which needs a human readable name

Specialisations are a part of the program, 3 specialisations in a program. For the MIT, 12 units, but still dependent on the specialisations. Code could be MIT-SPIT

Knowledge base must be modified accordingly to the CAIDI parameters

Criterion C will have 3 worksheets – Overview, Mapping Summary, Mapping Details

Latex Output

Produce an output per program instead of criterions, each program will have a separate .tex file instead

Create a config file where it makes it possible to generate only one Criterion or a number of Criterions instead of always generating all of them

For Criterion C, the design is similar to Criterion D, the assessment column is the CBOK column, and then the third column is the comments, two tables, Justification tables and CBOK table

Rubric for Criterion B comes from the ACS form, lets the client check if the requirements are present for that specific criterion

HTML Output

The tags work, there seems to be duplicates, which affects Latex output as well.

Currently, the output is separated by Criterions, will try to do it course-wise, make a menu or a sidebar for sections.

Possibility to switch the view the accreditation information by criterions or programs.

Before the next meeting:

Future plans:

Low priority, being able to add columns for the semester count (study plan column).

There is much information that must be presented in a more navigable or presentable way.
